

Motionline is a wireless connection between SmartScan luminaires enabling the creation of control groups. If any single luminaire detects movement all connected luminaires within the group will illuminate.

This valuable feature is designed to eliminate the possibility of a user being isolated in a small pool of light, surrounded by intimidating darkness. The Motionline ensures that there will always be a well lit comfortable environment. Once the last person leaves an area the luminaire waits for a pre-programmed period before turning off or dimming to a user pre-defined level.

WITH MOTIONLINE

With Motionline a group of luminaires can be turned on when any one sensor detects movement.

WITHOUT MOTIONLINE

Without Motionline each luminaire will only turn on if a person is within its immediate area.

SMARTSCAN WIRELESS MOTIONLINE

Figure 1: Wireless Motionline

Groups are formed by addressing rather than hard wiring, so groups may be altered at any time by re-programming, offering increased flexibility (see Figure 1).

Recessed SmartScan luminaires are modular wired using 3-core leads for mains connections.
